THE SINGER

SEWING MACHINES.

THE SINGER MANUFACTURING CO.'S NEW FAMILY MACHINE.—No other family Sewing Machine has so rapidly won favor in the household. The very large sales of that popular machine, as shown by official returns, far exceed those of any other company, and this factor result has been owing to its real merits—hence its great and growing popularity. It is simple in construction, easily understood, easily operated—all its parts gliling smoothly and noiselessly along—not liable to get out of order, has capacity for a great range and variety of work, sewing sil kinds of cloth and with all kinds of thread, and with the numerous attachments for hemming, cording, tucking, quilting, trimming, binding, traiding, &c., and embroidering of many ingenious, tasteful and difficult designs, is the most perfect of all family sewing machines. Any one who will take the trouble to examine the merits of the different machines claiming attention, different machines claiming attention, and costs. ours. It would avail us nothing to make the above assertions if we were not ready to prove them, and all we ask is a trial, for observation alone can justly couvey a clear impression of the many kinds of work of which our new family machine is capable.

THE FOLDING CASES.

open with spacious tables to sustain the od which fold into tables or boxes to protect hines, when not in use, from dust and medfingers, are made from choice woods, emil by pleasing designs, thus making our new usehine not only an ornamental piece of e, but in some of the more elaborately finachines, a work of real art.

THE ATTACHMENTS

Of our new family machine, above referred to, are not only numerous, but highly useful for the purposes for which they were intended. They need only a trial to show their great value. Among the most recent of the attachments is the

EMBROIDERER!

Of the different attachments of our new family machine which have secured the attention and approval of our customers that for embroidering, like the Hammer, is one of the few instruments which will most please and satisfy the observer of its real value. It is so simple in structure, that any one who can sew on our machine on use it, and without instruction. It may be attached to or detached from the machine in an instant. Without a lengthy description, and even then, it would be difficult to describe the great variety of work that this little in strument will do. The redder must not suppose that what we speak of is a mere chain stitch operatios, which is sometimes humorously termed embroidery. If desired, three colors of any kind of thread may be used at any one time, and the colors or thread may be changed at the will of the operator, by removing the spools in use and putting others in their stead; thus as many or as few colors may be used as the operator wishes, in the embroidering of any garment. A great variety of results are produced by the manner in which the tensions are regulated, Different results may be produced while the machine is in motion by simply changing the tensions Results vary according to the length of stitches, kinds, colors and tensions of the threads. while the machine is in motion by simply changing the tensions Results vary according to the length of slitches, kinds, colors and tensions of the threads, as well as sizes of the needles used. The Embroi-derer will use any kind of thread. The use of zephyr worsted forcertain purposes gives very pleasing re-ults. In order to get a just idea of this valuable attachment it will be necessary to see it in opera-

Manufacturing Machines.-We would ask attention to our new Button hole Ma-chine, which is the only practical Eutton-hole Ma-chine claiming public attention. Our manufactur-ing machinos, for other purposes, are too well known

Machine Twist.—We have recently enlarged our Sik Mills in Newark, N J., and furnished them with the latest and most improved machinery, which is being operated by highly skilled labor. We know and feel the importance of not only supplying the users of our machines, but the trade generally with the best quality of Machina Twig, which we sell by measure rather than by weight. The system of selling by weight has given manufacturers the opportunity of so beavily weighting Silk in the process of dyeing as not only to greating filk in the process of dyeing as not only to greating filk in the process of dyeing as not only to greating filk are graduated is also a matter of great importance, but we use the greatest possible sare that the graduating shall be exceeding accurate. In addition to manufacturing from the best quality of naish of the neumfactured article will not we think, be soon surpassed. Each spool of silk manufactured by us, of any particular size or letter, trespective of weight, contains the number of yards printed thereon. Length, strength, size, quality and finish of the thread are to be looked to rather than weight. We are now silk manufacturers on a large scale, and feel that a large trade can only be retained by us in furnishing a supecior article at a less price than ours, purchasers may rest assured that it is inferior in quality, deficient in quantity, or both. Machine Twist.—We have reles i price than ours, purchasers may rest assured hat it is inferior in quality, deficient in quantity, public.

We have and shall keep in stock at our Central Office, and various agencies, Twist of all sizes, and of the various colors and shades of color in use, and which will be sold at New York prices.
